

# HOW WE ORIENT

## JUSTICE. RECIPROCITY. TRANSFORMATION. RENEWAL.

RENOVANT®'s compass for work that is meant to last. Four values guiding how we design, partner, and decide—across people, place, and ecosystems.

### OUR GUIDING PRINCIPLES

We approach sustainability as an ethical practice, not a branding exercise. Our work is guided by justice, transformation, reciprocity, and renewal—values that ask not how to make existing systems last longer, but how to align human activity with ecological limits, responsibility, and long-term care. We work with clarity about power, scale, and consequence, and we believe sustainability must be honest enough to question what should continue and what should not.

### JUSTICE

Justice means naming responsibility where it actually lies. Environmental and social harm are not accidental; they are produced by specific systems of extraction, production, and development. We reject approaches that place the burden of repair on individuals while leaving structural drivers untouched. Our work prioritizes reducing harm at the source, accountability across supply chains, and partnerships that do not externalize costs onto communities, ecosystems, or future generations.

# BE A NET POSITIVE FORCE IN THE WORLD

## RECIPROCITY

We do not separate economy from ecology or production from responsibility. Reciprocity means operating on balanced budgets with nature, where material use, energy, and extraction remain within regenerative limits. We define productivity by how well systems meet real human needs—food, shelter, water, safety, belonging, meaning—while minimizing ecological damage over time.

Knowledge, for us, is about relationship with place, not domination over it.

## TRANSFORMATION

Transformation is not incremental optimization of broken systems. It is a change in direction. We support projects willing to question scale, necessity, materials, and long-term impact—not just efficiency.

Sometimes transformation means building differently; sometimes it means choosing not to build at all.

We see refusal, repair, and restraint as legitimate and often necessary forms of progress.

## RENEWAL

Renewal is not novelty for its own sake. It is the continuity of life. We believe the future is not waiting to be invented by technology alone, but also remembered, re-contextualized, and protected from becoming another extractive solution.

Innovation matters when it reduces dependence on depletion, restores agency, and supports long-term resilience rather than short-term impressiveness.

# OUR APPROACH IN PRACTICE

We work within established frameworks like PMP® (Project Management Professional), LEED® (Leadership in Energy and Environmental Design), and ESG standards while staying honest about their boundaries and ecological limits. These tools enable rigorous execution—PMP® for structured delivery, LEED® for building performance metrics, ESG for broader impact reporting—but we go further by prioritizing locally driven, place-based solutions; materials and technologies that minimize embodied harm (like low-carbon alternatives to cement/steel); and partnerships avoiding soil depletion, massive water extraction, fossil fuel dependence, or toxic waste.

We confront urban metabolism head-on, ensuring "green" outcomes reflect full ecological footprints, not just site-specific metrics.

- Place-based solutions rooted in specific ecosystems and histories
- Balanced budgets with nature—designed to last, not impress
- Minimal material throughput focused on essential needs
- Circular material partners that reduce carbon and extraction at the source

## THE **FUTURE** WE WORK TOWARD

We are working toward a future defined by justice, ecological balance, and sufficiency—not by the endurance of existing power structures. Appropriate production. Collective restraint. Repair over expansion. A definition of productivity grounded in human needs and ecological limits—where harm is prevented through sufficiency, not managed after the fact.

A future that is materially simpler, slower, and more place-based, not because ambition is lacking, but because exceeding planetary boundaries is no longer optional. **We partner with those willing to think critically, act responsibly, and build only what can truly last.**

**THIS ORIENTATION IS AN INVITATION. IF YOUR PROJECT ALIGNS,  
RENOVANT® IS READY TO WORK TOGETHER.**
